Sturdy Patient Support Surface

Narrow Footprint for Easy Access to the Patient

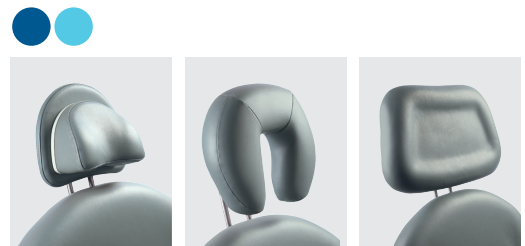

Flexible Positioning with Rotation Base

Optional Programmability

Optional Electrical Outlets on the Chair

Headrest Accessories for an Optimized Workspace and Patient Comfort

Accessories for an Optimized Workspace

PROPER POSITIONING, EFFORTLESS COMFORT

Provide your best patient care in a chair designed to prioritize proper positioning for clinicians and patients. The Midmark 641 Oral Procedure Chair effortlessly combines safety, performance and ergonomics into a uniquely positive clinical experience for everyone.

NARROW FOOTPRINT FOR EASY ACCESS TO THE PATIENT

- Get as close to your patient as needed with a small base footprint and adjustable sliding back section rails.
- Sit or stand for procedures without compromising ergonomics with a narrow back section.

FLEXIBLE POSITIONING ROTATION BASE

- Quickly and smoothly move patients to your desired, ergonomically correct working position with four-function powered movement.
- Simplify your workflow and avoid potential damage or injury by easily rotating the chair rather than moving heavy, expensive equipment around the working zone.

STURDY PATIENT SUPPORT SURFACE

- Decrease oral cavity movement and the risk of injury with a rigid scissor lift mechanism that is more stable than the market standard.

- Improve patient comfort and lower anxiety with less chair and head movement during procedures.

OPTIONAL PROGRAMMABILITY

- Enhance workflow and reduce the time required to properly position patients with the ability to store up to four pre-programmed positions.
- Make patients more comfortable and relaxed by making all chair movements smoothly and at once.

OPTIONAL ELECTRICAL OUTLETS ON THE CHAIR

- Optimize workflow and reduce unnecessary reaching by adding ancillary devices directly onto either side of the chair.
- Avoid the safety hazard of electrical cords running across the room by keeping devices directly on the chair.

ENHANCED PATIENT COMFORT AND SAFETY

- Make patients more comfortable with a premium comfort system and adjustable footrest.
- Improve patient safety with contoured upholstery made to keep patients in place.

HEADREST ACCESSORIES FOR AN OPTIMIZED WORKSPACE AND PATIENT COMFORT

- Create the optimal work space for different procedures using multiple interchangeable headrest options.
- Expand your range of patient positioning options with fully adjustable headrests.

ACCESSORIES FOR AN OPTIMIZED WORKSPACE

- Prevent clinician fatigue by choosing optional wrist rest supports.
- Keep patients where you need them for better workflow using any of the many available patient restraint and support accessories.
