NOVEMBER IS DIABETES MONTH!!!!

Dogs and cats like people can develop diabetes, a condition where the sugar levels in the body are not regulating properly any more. While there is no cure for the condition, there are ways to manage the condition so that your patients can continue to live a happy, healthy and active life.

Diabetes mellitus, the medical name for "sugar diabetes," is a condition that affects the concentration of glucose a type of sugar, in your pet's blood. Diabetes results from a shortage of insulin or when the body has trouble using the insulin it has made properly by the pancreas.

Subtle changes in a pet's health and interaction can alert clients of a problem. When they come to your clinic for a check up make sure you monitor them appropriately.

It is important that Veterinary Professionals monitor diabetic patients for

It's important that Veterinary Professionals monitor diabetic patients for hypertension. Pets that are diabetic can be at risk for other ailments such as kidney disease and heart disease so it is important that blood pressure is regulated. Also remember that diabetic patients can see a change in ECG waveforms so be sure to run a strip on animals when they come in if you suspect diabetes.

QUESTIONS REGARDING DIABETES IN VETERINARY PATIENTS????
