PowerMax Surgical Suction Installation

Equipment Alert
PowerMax surgical vacuum system must be installed per local plumbing and electrical codes. Refer to “Site Requirements” and “Site Layout” in this manual for site restrictions and piping layout.

## Plumbing

**Intake (Suction Line)**
- Type: Type K or L Copper Tubing - *Note: Do Not use compression fittings for vacuum lines.*
- Line Sizing:
  - 1"
  - 1 1/4"
- Operatory Termination: 5/8" OD Copper

**Exhaust**
- Exhaust May be vented to the outside using an optional Exhaust Kit. (Available from Midmark)
- Vent Type: Copper Tubing or Conduit (Installer Supplied)
- Line Sizing: 3/4"

## Environmental

- Equipment Room Ambient Temperature - Operational: 40° - 104° Fahrenheit / 4° - 40° Celsius

## Installation Kit Provided with PowerMax

- **6’ Vacuum Hose with 1/2” NPT Connections**
  - Connects from PowerMax to Operatory
- **Feet, Qty 4**
- **Hardware for Feet, Qty 4**
  - Bolts and Washers

©Midmark Corporation 2007
To prevent moisture from entering the PowerMax, use appropriate 90 elbows to cap an outside vertical line.

Disconnect Box 208-230VAC - 20 Amp
Single Phase 50/60 Hz Circuit with approved ground required.
(Provided by Electrician)

If Optional Exhaust System is Used
Only Install, “Midmark PowerMax Exhaust Kit”

Notes:
**Intended Use**
To provide suction during procedures conducted by qualified dental professionals.

**Electromagnetic Interference**
The Midmark PowerMax Vacuum is designed and built to minimize electromagnetic interference with other devices. However, if interference is noticed between another device and these units:
- Remove interfering device from room
- Plug interfering device into an isolated circuit
- Increase separation between unit and interfering device
- Contact Midmark if interference persists

**Disposal of Equipment**
At the end of product life, the unit(s), accessory, and other consumable goods may become contaminated from normal use. Consult local codes and ordinances for proper disposal of equipment, accessories and other consumable goods.

**Transportation / Storage Conditions**
Ambient Temperature Range: 40°F to 104°F (4°C to 37°C)
Relative Humidity: 10% to 90% (non-condensing)
Atmospheric Pressure: 500hPa to 1060hPa (0.49atm to 1.05atm)

---

**Safety Symbols**

- **DANGER**
  Indicates an imminently hazardous situation which *will* result in serious or fatal injury if not avoided. This symbol is used only in the most extreme conditions.

- **WARNING**
  Indicates a potentially hazardous situation which *could* result in serious injury if not avoided.

- **CAUTION**
  Indicates a potentially hazardous situation which *may* result in minor or moderate injury if not avoided. It may also be used to alert against unsafe practices.

- **Equipment Alert**
  Indicates a potentially hazardous situation which could result in equipment damage if not avoided.

**Note**
Amplifies a procedure, practice, or condition.

---

**IPX0** Ordinary Equipment

*This product has been evaluated with respect to electrical shock, fire & mechanical hazards only, in accordance with UL60601-1 and CAN/CSA C22.2 NO. 601.1.*
Before you Install...

Pre-Install steps:
A. Remove PowerMax from shipping platform.
B. Move PowerMax to a dry, well ventilated area on a solid, level surface.
C. Verify all sides of PowerMax are not obstructed.
D. Unpack installation kit.
E. Install rubber feet.

Equipment Alert
PowerMax must have minimum clearance of 30” in front and 12” on remaining sides.
Installation
Plumbing Connections

Plumbing Connections...
A. Connect vacuum hose to PowerMax vacuum line.
B. Connect opposite end of vacuum line to vacuum piping outlet station.

Note: Vacuum line to operatories should be type K or L copper tubing. Do not use compression fittings for vacuum lines, refer to "Site Requirements in this manual for tubing size."

Equipment Alert
Vacuum system must terminate at a surgical operatory recovery room package (Available from Midmark) to prevent contamination of vacuum outlets and the PowerMax.
Installation

Electrical Connections - Supply Box and Remote Panel

Electrical Connections...
A. Connect remote panel wires to Low Voltage Control wires if applicable.
B. Connect conduit cable to user supplied electrical box.

*Refer to Specification Sheet for Electrical Ratings in this manual.

Supply Box
*208-230 Volt Source
Single Phase, 50/60 Hz
Recommended - 20 Amp Fuse Disconnect Box (Electrician Supplied)

Control Panel Reference Cross Wiring

**Check Vacuum System**

**A. Check for leaks.**

**B. Check Vacuum switch On/Off setpoints**

### Checking for Leaks...
- Turn PowerMax on, allow it to reach 20”Hg.
- Close inlet valve.
- Do not use any vacuum piping for several minutes.
- If gauge drops while inlet valve is closed, there is a leak in the unit.
- Open inlet valve.
- If gauge drops after opening inlet valve, a leak in the office piping system.
- Repair any leaks found.

### Check Vacuum Setpoints...
- Close ball valve and drain valve.
- Turn PowerMax on.
- Observe Gauge, unit should shut off at 20”Hg.
- Open drain valve, unit should turn on at 13”Hg.
- Perform adjustment if necessary

### Adjustments

**Vacuum Range Switch Adjuster**

Adjust vacuum range if system didn’t shut off at 20”Hg.
- Clockwise will decrease reading.
- Counter Clockwise will increase reading.

**Low Setpoint for Low Limit**

Adjust Low Limit if system didn’t turn on at 13”Hg.
- Clockwise will decrease reading.
- Counter Clockwise will increase reading.
