Sustainable casework designed specifically for dental environments.

We have aligned our Integra™ Dental Casework product attributes with LEED®, the nationally accepted benchmark for the design, construction and operation of green building projects.

The Leadership in Energy and Environmental Design (LEED) Green Building Rating System is a third-party certification designed to encourage and accelerate the adoption of sustainable green building. LEED promotes a whole-building approach to sustainability by recognizing performance in five key areas of human and environmental health: sustainable site development, water savings, energy efficiency, materials selection and indoor environmental quality.

Benefits

As cited on the U.S. Green Building Council (USGBC) website (usgbc.org), there are both environmental and financial benefits to earning LEED certification. LEED-certified buildings are designed to:

- Lower operating costs and increase asset value
- Reduce waste sent to landfills
- Conserve energy and water
- Be healthier and safer for occupants
- Reduce harmful greenhouse gas emissions
- Qualify for tax rebates, zoning allowances and other incentives in hundreds of cities
- Demonstrate an owner's commitment to environmental stewardship and social responsibility

Partner with us

We want to be your partner in LEED certification of green buildings, today and into the future. Because we care...we support the contribution to a more sustainable, healthy environment and are committed to providing "greener" products, without passing the additional costs to our customers.

The use of Midmark Integra™ Dental Casework can contribute to specifier strategies and LEED credits that impact building certification including:

- Water efficiency
- Construction waste management
- Material reuse
- Recycled content
- Local/regional materials
- Low emitting materials
- Innovation in design
