

# Protect Patients from the Moment They Sit Down

Today, your patients pay more attention to how you are proactively protecting them and talk about how safe or unsafe they felt during their visit in your office.

The first impression of safety begins the moment they sit down in your waiting room. **What kind of experience are you giving them?**

## Have a Seat

Cloth-covered seating can feel unclean and unsafe. Consider using the same safe, aseptic upholstery on your waiting room chairs as you use on your dental treatment chairs.

## Upgrade Your Upholstery

Ultrafabrics® upholstery for both patient seating and dental treatment chairs is made with a proprietary technology and high-performance polyurethane materials to help you stay ahead of the cleaning and disinfecting challenges found in high-traffic environments.

## Beyond Infection Prevention

Reduce other sources of unnecessary risk with the Elevance® Dental Chair's child lockout system to help protect curious children from potential injury and collision protection system to help prevent damage to personnel or equipment as the chair is in motion.

Welcome patients into a clean environment from the waiting room to the treatment room with seating designed for safety.

Ultrafabrics is a registered trademark and brand of Ultrafabrics LLC, Tarrytown, NY.
