**▲WARNING**

Shor-Line products are designed for animal use only.

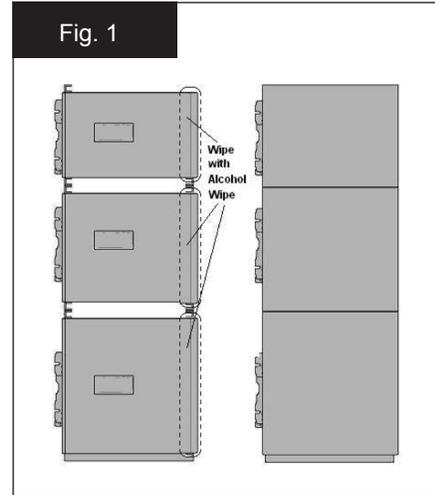

## Installing Cage End Panels

### {Before Installation}

- Remove grease, grit, and grime from the side of all End Cages (right) using the alcohol wipes we provided.

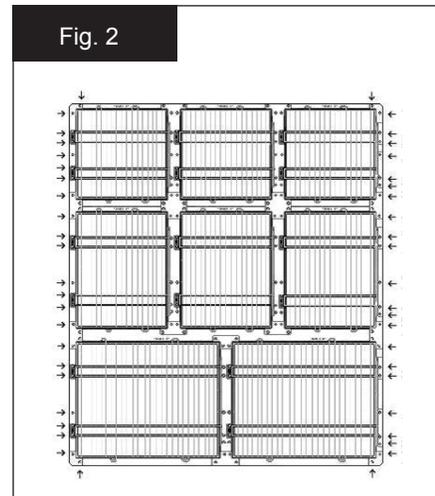

**IMPORTANT:** The cages on either end of the assembly must be thoroughly clean and dry for our two-way adhesive tape to hold. See Fig. 1.

### {Cage End Panel Installation}

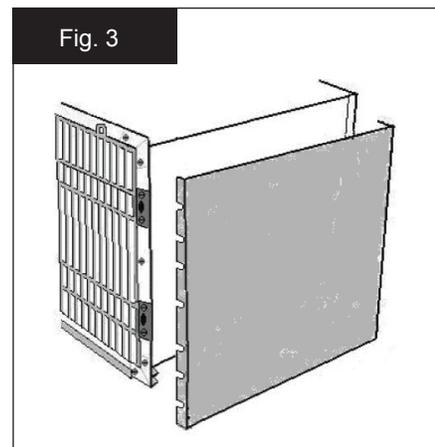

#### Step 1

Loosen all External Screws connecting outside End Cage Hinges, Latches, and Trim Plates so End Panels can be inserted behind them. See Fig. 2.

#### Step 2

Peel the white protective covering off of the Cage End Panels. Begin with the Cage on the end of the Bottom Row and locate the appropriate-sized End Panel. Panels vary in height but have slots cut into their front frames to align with Hinge and Latch Screws. See Fig. 3.

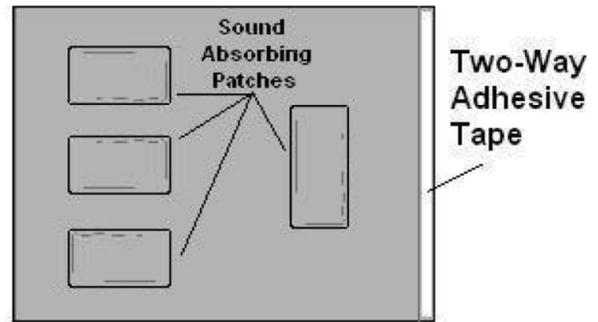

### Step 3

Remove the adhesive tape backing from the End Panel's back lip. See Fig. 4.

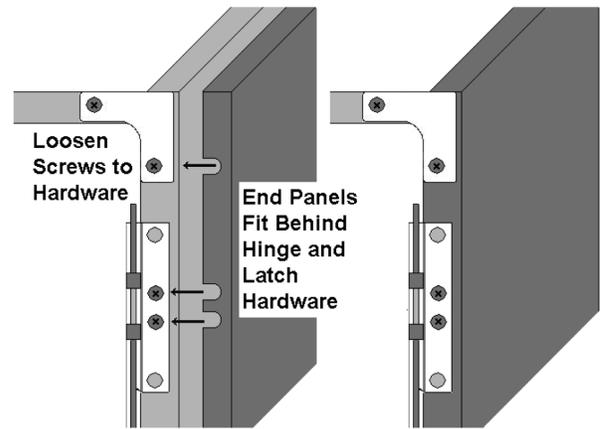

Fig. 4

### Step 4

Position End Panel onto Cage so Panel's slotted front frame fits beneath the Cage's Hinge and/or Latch Screws and the two corner Trim Plate Screws. Fit the End Panel directly over the outer-side of the Cage. See Fig. 5.

Fig. 5

### Step 5

Press all four sides of the panel firmly against the Cage side so the two become connected. Provide pressure for about 60 seconds. Repeat for all End Panels.

### Step 6

When all are installed, tighten all screws (refer to Step 1) on your kennel system securely.
