

Protect Patients from the Moment They Sit Down

The first impression of safety begins the moment your patients sit down in your waiting room. What kind of experience are you giving them?

Have a Seat

Cloth-covered seating can feel unclean and unsafe. Consider using the same safe, cleanable upholstery on your waiting room chairs as you use on your dental treatment chairs.

Upgrade Your Upholstery

Upholstery for both patient seating and dental treatment chairs is made with proprietary technology and high-performance materials to help you stay ahead of the cleaning and disinfecting challenges found in high-traffic environments.

The Limited-Seams Advantage

Limited-seams upholstery helps lower the risk of cross-contamination by minimizing debris-collecting crevices and creating smooth surfaces that are easier to clean and disinfect.

Welcome patients into a clean environment from the waiting room to the treatment room with seating designed for safety.
