The podiatry chair is positioned at an angle, which provides more effortless access to the foot area for the caregiver—whether in a seated or standing position. The room also provides an abundance of streamlined, well-organized storage.

**REAL-TIME LOCATING SYSTEM**
Use of a real-time locating system or patient self-rooming workflow can assist in waste reduction efforts that help eliminate costly bottlenecks.

**PUBLIC/PRIVATE ZONES**
The family/visitor zone, also known as the public zone, does not encroach on the movement of the caregiver. It includes displays for educational brochures and related care products and is clearly separated from the procedure zone.

**PROCEDURE ZONE FLEXIBILITY**
The procedure zone puts the caregiver in the center. While the cart for primary instruments and supplies can be stored under the countertop and out of the way during procedures it is moved to either side of the caregiver. This helps to maintain a short reach zone. An instrument tray attached to the procedure chair supports instruments and supplies or mobile devices.

**CLINICAL PROCESS IMPROVEMENT**
The podiatry chair is positioned at an angle, which provides more effortless access to the foot area for the caregiver—whether in a seated or standing position. The room also provides an abundance of streamlined, well-organized storage.

**AMERICANS WITH DISABILITIES**
The height-adjustable podiatry chair decreases the need for manual lifting and repositioning patients. The center of the room is kept open to allow a 60-inch wheelchair turning area. There is also ample room for patient egress.
