

Column Assembly Replacement Kit [002-10507-xx]

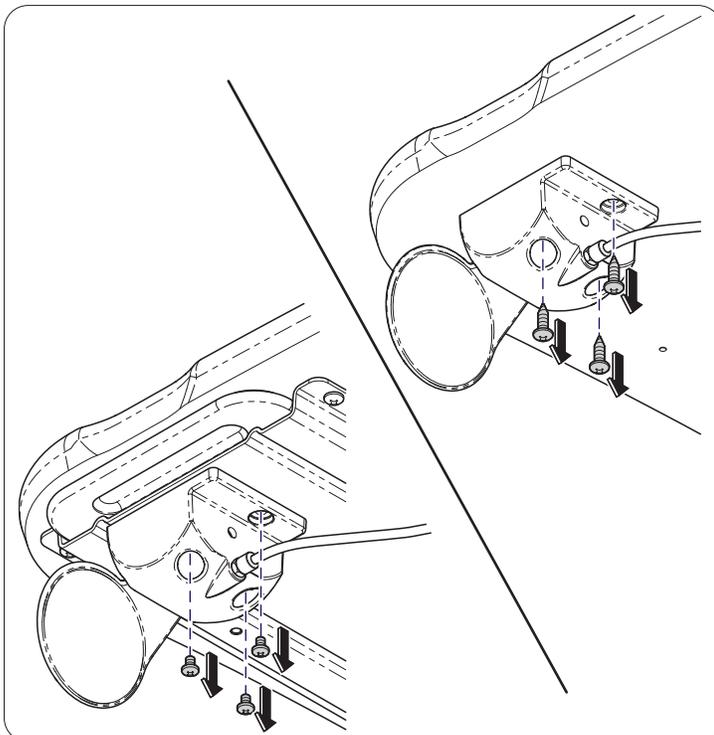

Step 1:

If possible compress column to lowest position to verify correct kit by matching color on bottom of gas cylinders.

Step 3:

Remove screws (3) from hand actuator assembly to remove from worksurface or mouse tray.

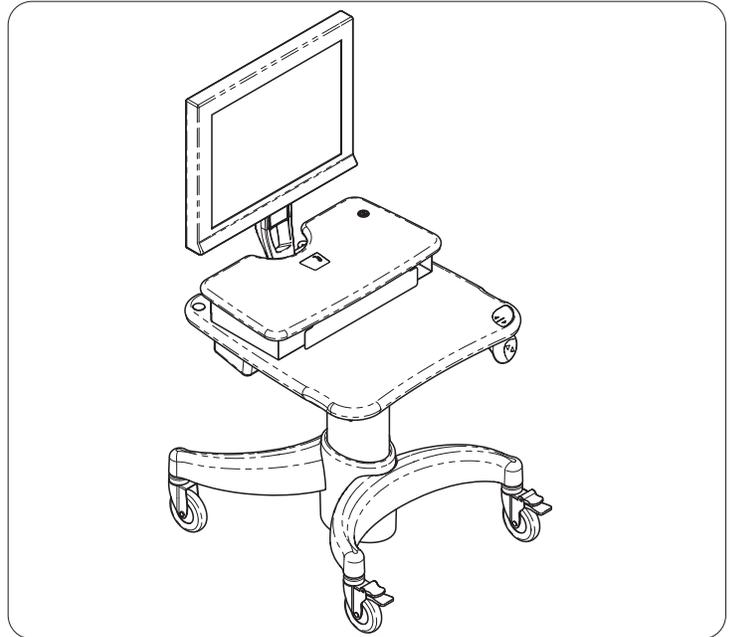

Step 2:

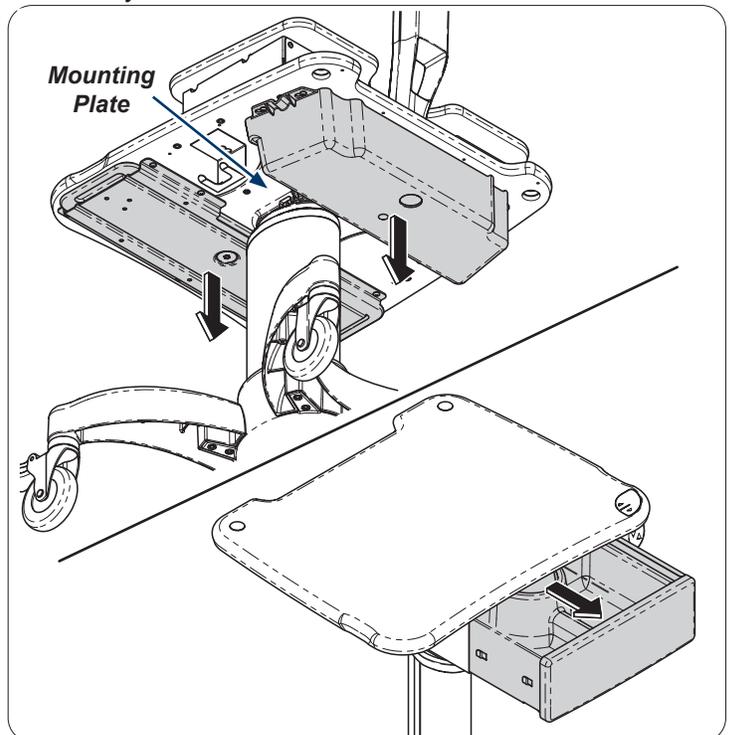

WARNING

Raise workstation to highest position. If workstation cannot be raised to highest position, proceed with caution. Pressurized gas cylinder assembled in this workstation.

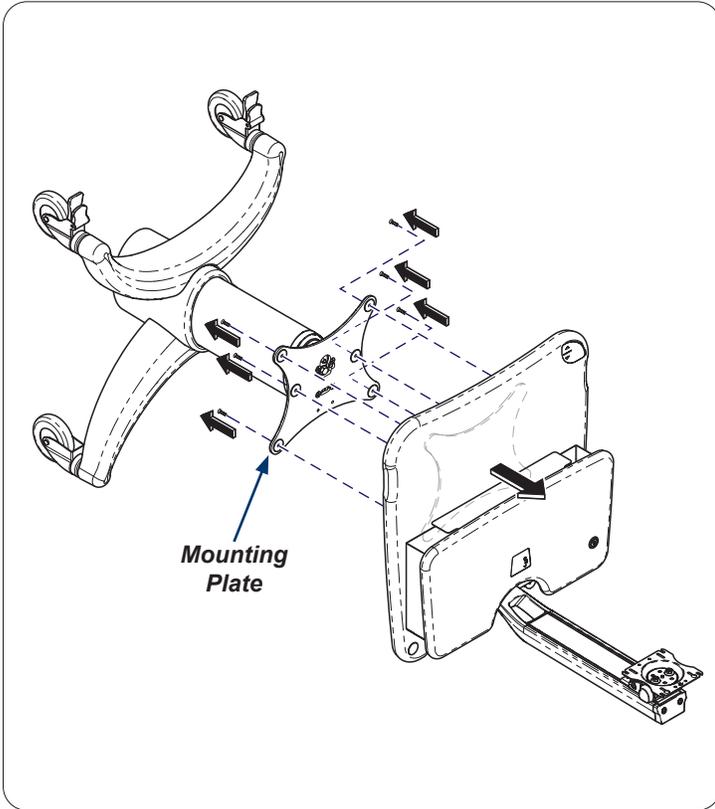

Step 4:

If necessary remove any accessories blocking access to mounting plate. Refer to www.midmark.com for any accessory for removal as needed.

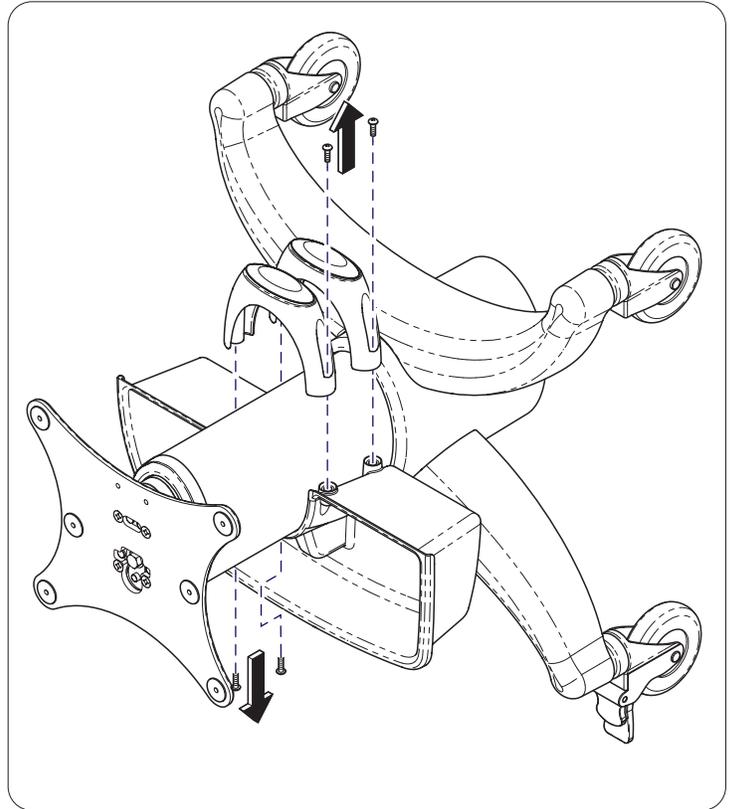

Step 5:

Remove screws (6) and work surface from mounting plate.

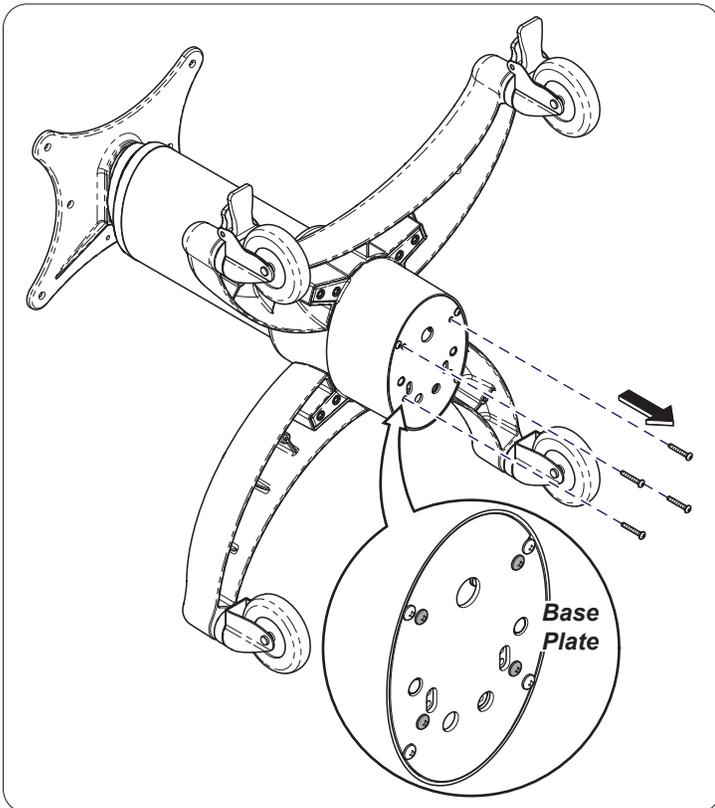

Step 6:

If necessary remove any accessories and attached collars from column. Refer to www.midmark.com for any accessory for removal as needed.

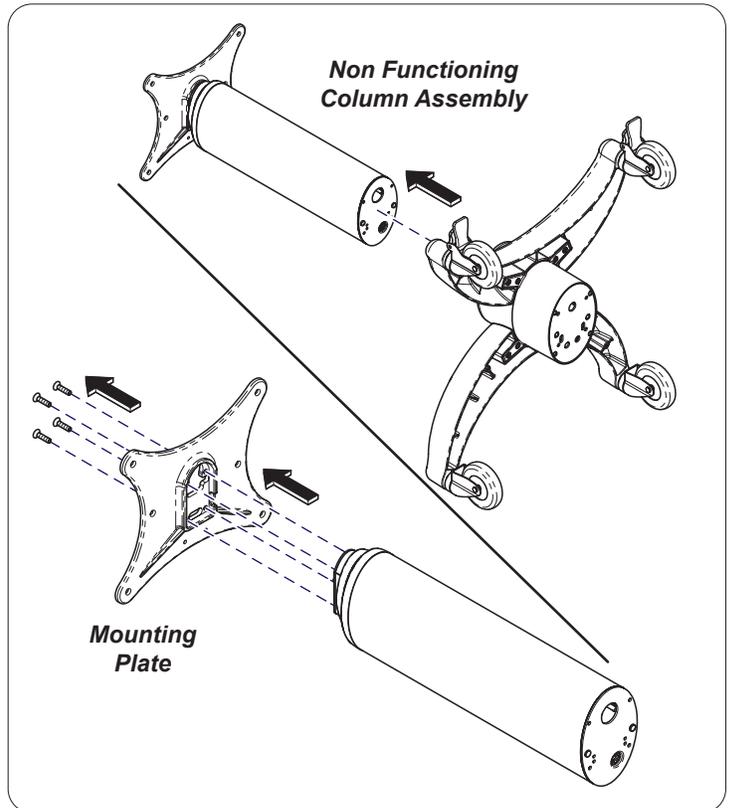

Step 7:

Remove inner screws (4) from non functioning column at the bottom of workstation. Leave base plate and outer screws (4) into base assembly.

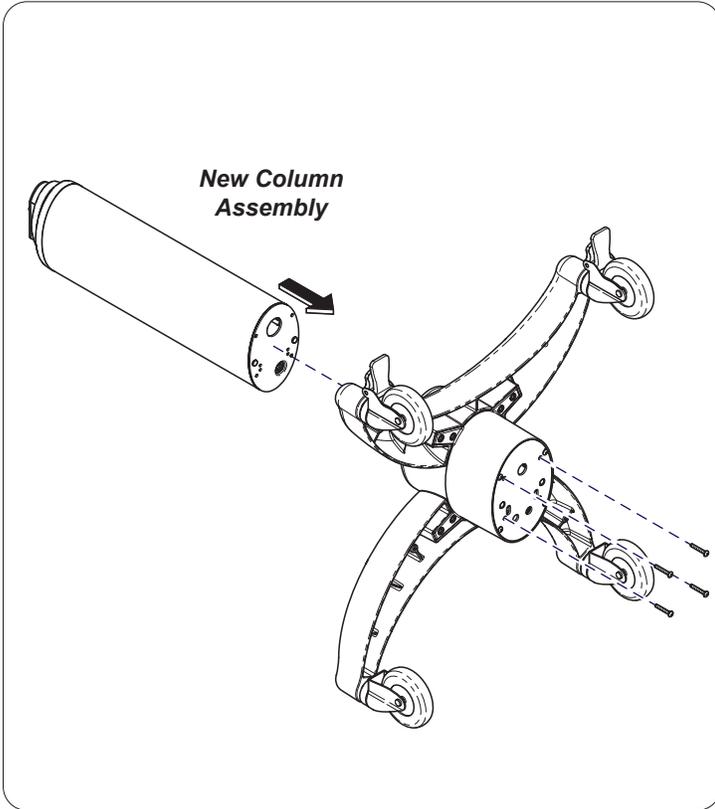

Step 8:

Remove non functioning column assembly by shaking column loose from base assembly. Remove screws (4) and mounting plate from column assembly.

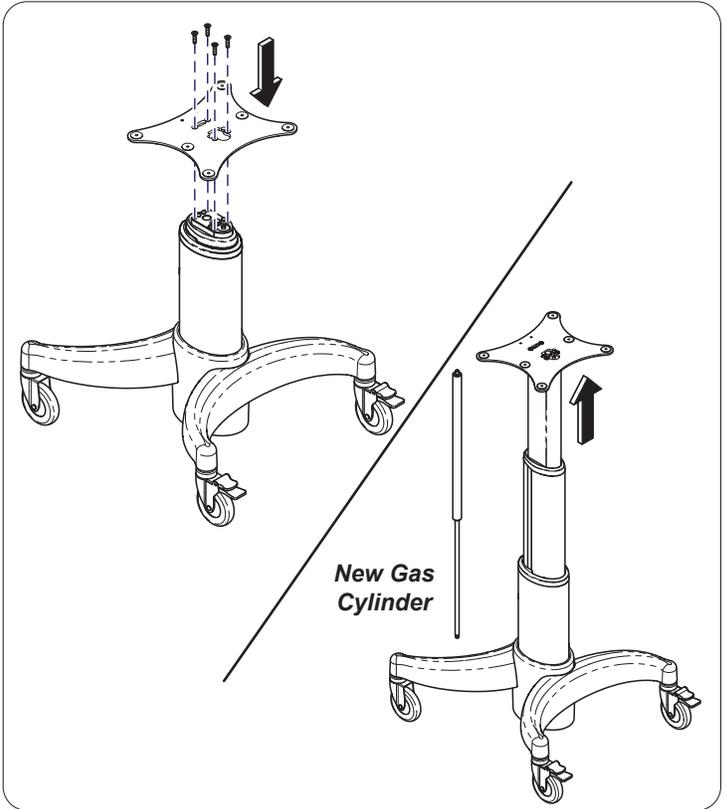

Step 9:

Install new column assembly into base assembly of workstation with screws (4).

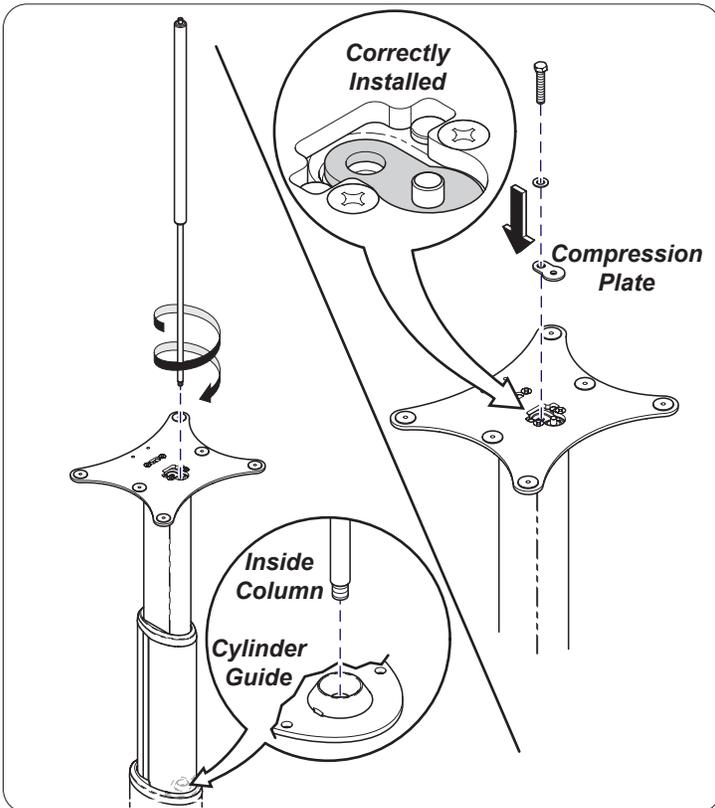

Step 10:

Install mounting plate to top of workstation with screws (4). Raise column to max height to install new gas cylinder.

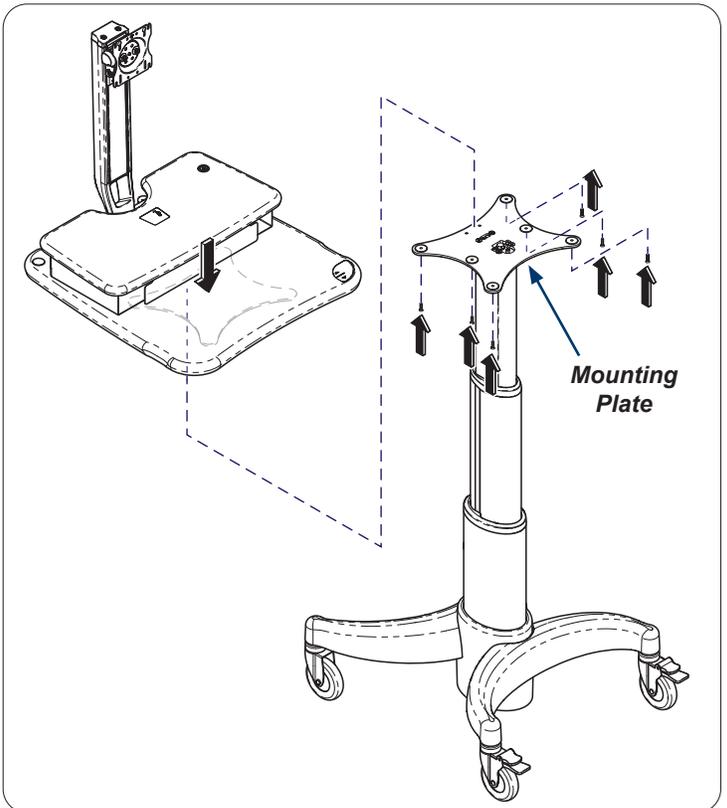

Step 11:

Rotate replacement gas cylinder into position in column and tighten. Secure by installing compression plate washer and bolt.

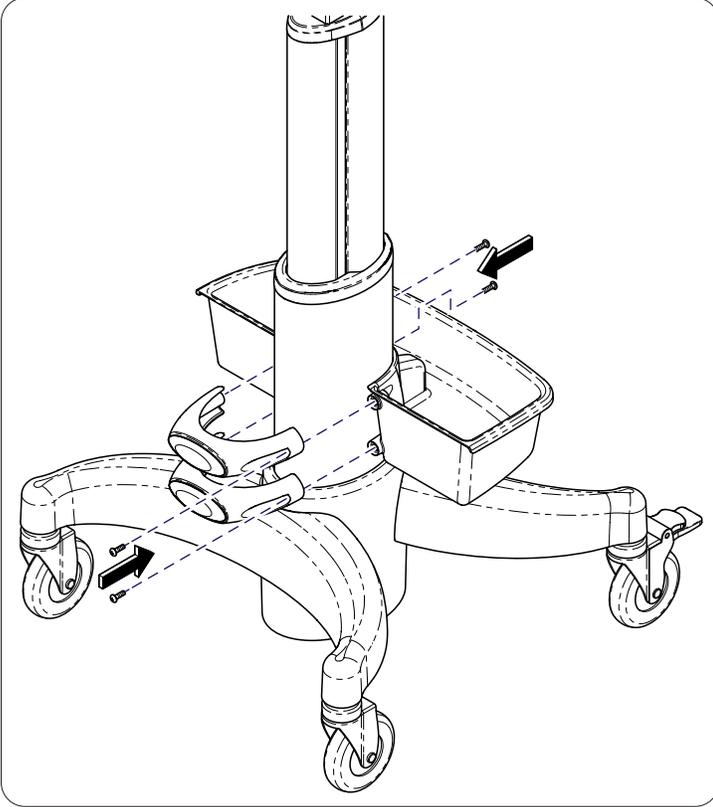

Step 12:

Secure worksurface to mounting plate with screws (6).

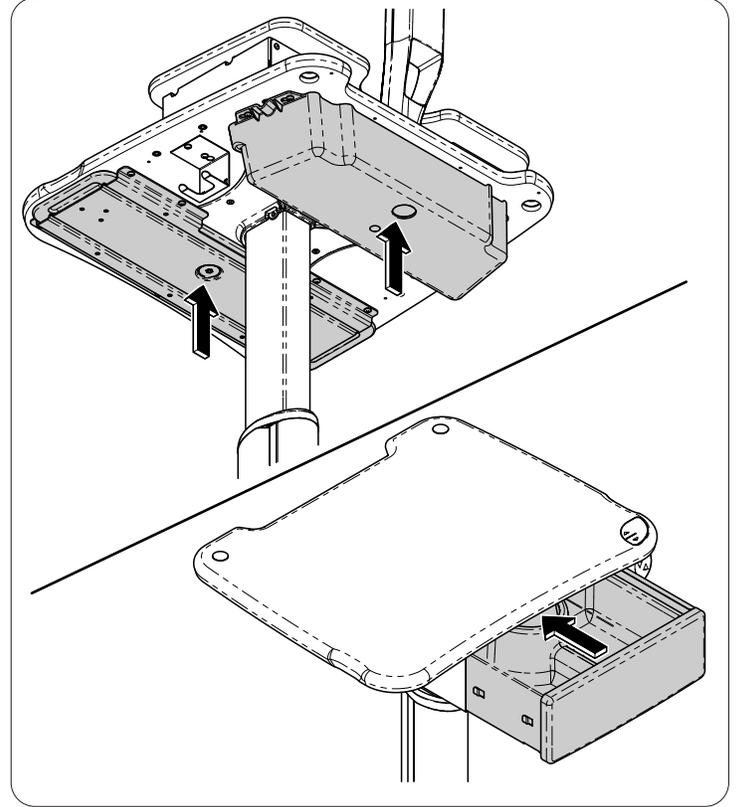

Step 13:

Install any accessories and attached collars to column.
Refer to www.midmark.com for any accessory for installation as needed.

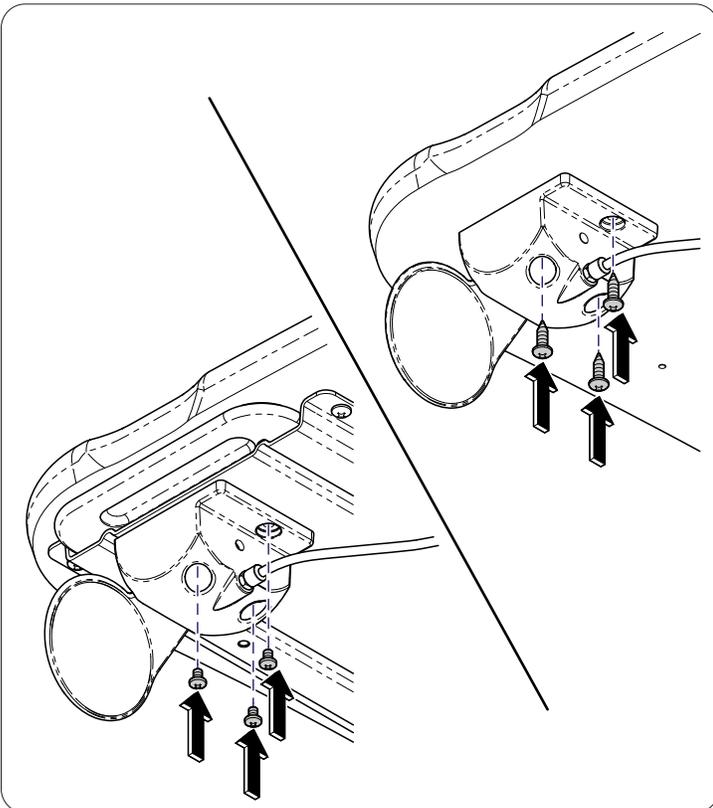

Step 14:

If accessories were removed secure as needed into position.

Step 15:

Secure hand actuator assembly to worksurface or mouse tray with screws (3).

Step 16:

Before testing Workstation be sure all components are mounted. Press hand actuator paddle to adjust.
